◆ EXPERTISE

Process Management

I map, analyze and redesign processes end to end (BPM): standardization, performance indicators and automation to reduce rework and cycle time.

Luiz Fernando Castilho

> I organize the process before automating it, so that technology speeds up the right operation instead of speeding up rework.

CORE CAPABILITIES

I map the real flow end to end — I model in BPMN the process as it actually happens, from trigger to delivery, crossing the areas that the org chart separates.

I measure where the operation loses — I collect cycle time, queues, rework and volume to show in numbers where the bottleneck and the cost are.

I redesign and standardize — I design the future process, remove non-value-adding activities and record the standard in a procedure the team can actually use.

I define indicators and owners — I set metrics for time, cost and quality, with a named owner, a data source and a reporting frequency.

I prepare the ground for automation — I separate what should be automated from what should be removed first, so technology does not speed up rework.

I install continuous improvement — I leave the review cycle, the process owner and the analysis routine running, so the gain is not lost the following year.

HOW I WORK

Talks and keynotes — what changes when the operation is managed by process rather than by department.

In-company training — BPMN, analysis and redesign: I pass on the method for the team to apply afterwards, to its own processes.

Hands-on workshops — the team itself maps its own process and leaves the session with the diagram and a prioritized list of bottlenecks.

Process review — an end-to-end reading of one critical process, with the points of loss quantified and a redesign recommendation.

Implementation — I lead the redesign, the standardization, the indicators and, where it makes sense, the automation, until the new process is running.

Ongoing advisory — I support the review cycles and the process owner, so improvement does not stop when I leave.

Scope and duration are defined by the size of the organization, the number of processes and its current maturity. A project delivers a change once; a process is what runs every day afterwards — leading the initiative itself is covered in the Project Management section.

Let's talk about the process that is holding your operation back.
